

# Berkshire Public School Enrollment Trends

**Berkshire Regional Planning Commission**

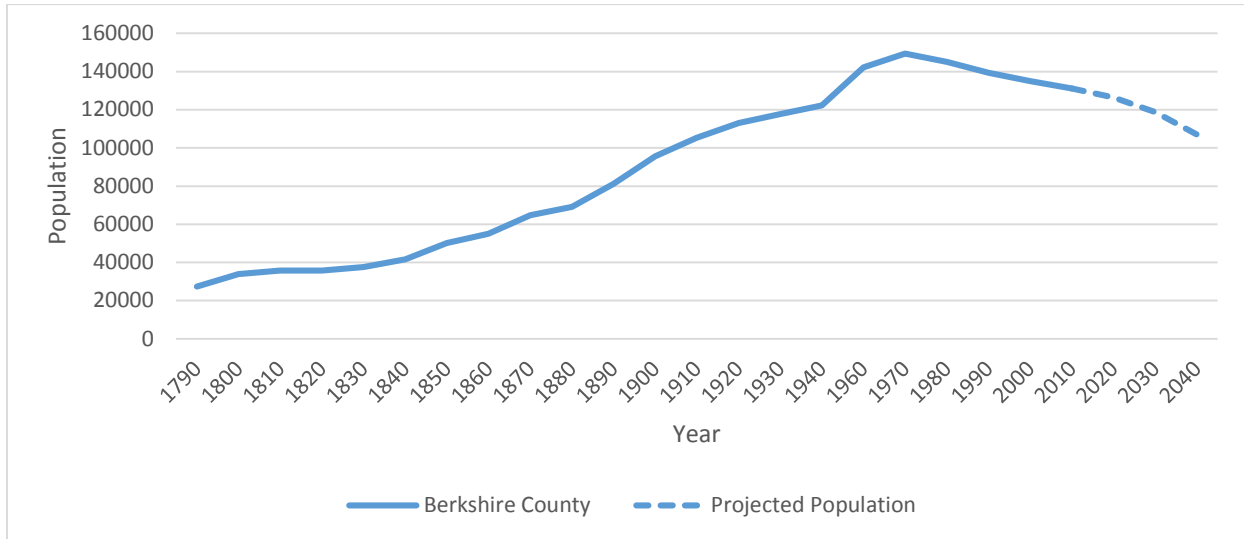

**May 7, 2015**

## Background

The public schools in Berkshire County have been losing enrollment for at least the last 15 years, experiencing a 22.1% (or 4,522 students) decrease since 2000. This is part of a bigger trend of a declining population in Berkshire County. The county as a whole has been losing population for the last 40+ years and is projected to continue to lose population over the coming decades (Figure 1).

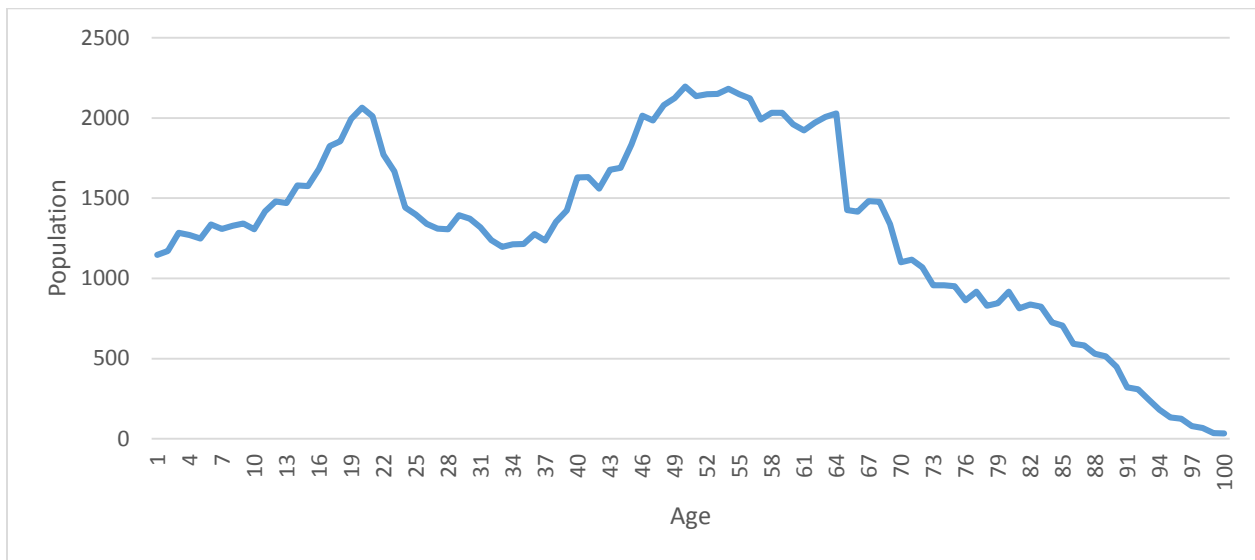

Figure 1 Berkshire County Population Trend

Source: US Census Bureau, Berkshire Regional Planning Commission

School enrollment is impacted by the declining population due to the significant decrease in young adults. Without young adults, the number of births in Berkshire County has gone down and will continue to go down unless more young adults reside in the county (Figure 2 and 3).

### Methodology

There are a number of factors that impact school enrollment, including choice, charter and vocational school enrollments as well as births and migration. All of these factors are necessary to consider in order to develop school district projections.

BRPC has not performed population projections at the municipal level, however birth data is available for each community. For enrollment projections, birth data that is available (through 2013), were moved ahead into their corresponding kindergarten class (babies born in 2010 attend kindergarten in 2015). For future years for which birth data is not available, the last five years of births have been averaged together for each municipality. This average was compared to the previous five years to determine the percent change over time. This percentage was then applied to the five year average number of births to come up with the future number of births for each subsequent year.

The number of babies born in a given year does not usually equal the number of kindergarteners that actually start five years later. This is due to new residents moving into the area (migration), choice students, students going to private schools, and other factors. The last five years of kindergarten enrollment was compared to their corresponding birth year and the average difference was determined. This difference was then applied to each incoming kindergarten class to get projected enrollment.

School enrollment is not a steady number with fluctuations throughout the year and between each year. To better understand these yearly fluctuations, the difference between subsequent grades in subsequent years was averaged over the last five years. For example, a district may have 50 students in kindergarten one year, but only 45 first graders the following year. This 5 student difference was averaged with other years and the change was applied to the previous year's enrollment. This change

incorporates students who may move out of the area, choice to another district, go to the charter school or to the vocational school.

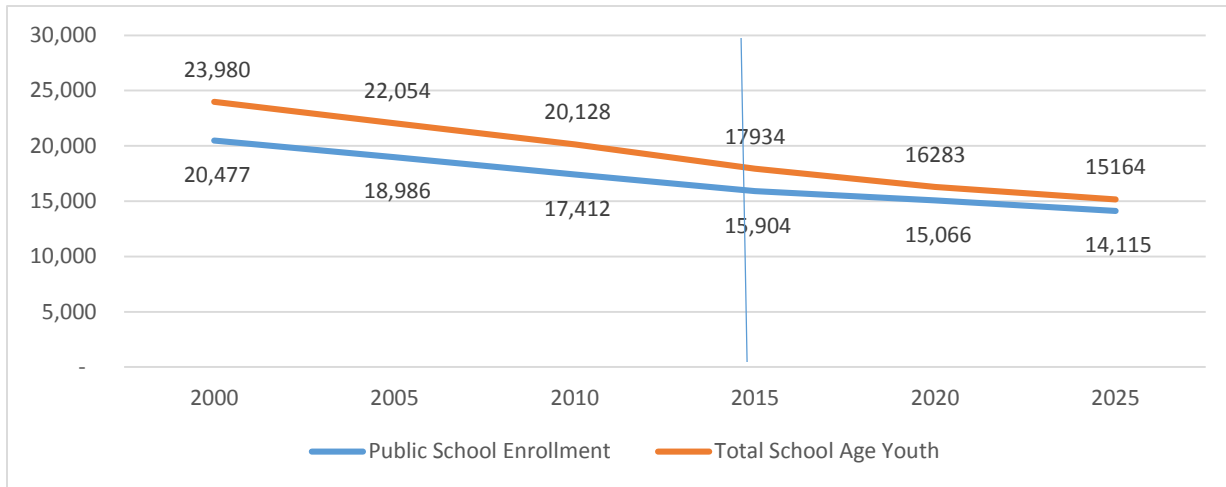

These totals have been compared to the county population projections for this age group. The county population projections are higher than school enrollment for both 2020 and 2025, so no adjustments to enrollments were needed match the county population trend.

The above methodology does not cap choice students by total number within a district or by class. The projections assume that if a district currently allows 10 additional students to choice into a grade, they will continue to allow 10 students to choice into that grade. It also should be noted that for many of the districts, a small change in births or choice will dramatically change the number of students projected to enroll. This model does not anticipate any changes to the existing trends for births or student movement between grades. In addition, the enrollment numbers presented here correlate with the state reported numbers and may differ from the school district's enrollment numbers,

## Results

Total regional school enrollment will continue to go down over the next 10 years by 1,789, or 11%, due to the decreasing number of births in the county (Figure 4 and Table 1). The majority of the school districts will face declines, however there are exceptions. The Berkshire Arts & Technology Charter School's enrollment will continue to go up for several years until they meet their maximum enrollment. The Northern Berkshire Vocational School District will continue to see steady enrollment as well. Three other school districts show steady or growing enrollments as well – Lanesborough, Lee and Richmond. Lanesborough's enrollment is only an increase of three students over 10 years, while Lee's enrollment is projected to stay exactly the same. Richmond's enrollment is projected to increase by 24 students, or 17%, however Richmond is a small school district with over half the students coming in via choice and the birth numbers are small enough that a change of a single birth or a change in choice can significantly change the projections. When looking at the total enrollment change by district, some of the larger districts will be seeing the largest decreases, with Adams-Cheshire, Central Berkshire, North Adams, Pittsfield and Southern Berkshire all experiencing a loss of over 250.

Figure 4 Total Public School Enrollment

Source: Massachusetts Department of Education, Massachusetts Department of Public Health, US Census Bureau, Berkshire Regional Planning Commission

When examining the high school enrollment (grades 9-12), the county will lose an estimated 448 students in high school by 2025, or a decrease of 9% (Figure 5 and Table 2). BART, Northern Berkshire Vocational and Mount Greylock are the only districts that will exhibit a steady or increasing enrollment, with BART increasing to around 229 students (100 increase), Northern Berkshire staying steady at 500 and Mount Greylock increasing by 10. All other school districts show a decrease in high school enrollment, with Central Berkshire showing having the largest loss of 174 students (32%), while Southern Berkshire has the largest percentage decrease at 43%, or 96 students.
